Work Program for Standard Setting and Revision

This Work Program provides stakeholders with an overview of the status of different Standards of Friend of the Sea, basically distinguished as seafood and non-seafood. The Technical and Scientific Department is responsible for setting and revising the Standards. Regarding the seafood standards, the full guidance for this process is available in the Standard Development and Maintenance Procedure.

At least every six months, the Technical and Scientific Department shall update this Work Program and make it available on the official website. These updates may refer to the list of seafood standards currently under preparation (Table 1) and the list of seafood standards that were adopted in the preceding period (Table 2).

Non-seafood standards (Table 3) are considered pilot projects and currently do not follow the same procedures of the seafood standards.
