Foreword

Friend of the Sea is a non-governmental organisation, which was established in 2008. Its aim is to safeguard the marine environment and its resources by incentivising a sustainable market and implementing specific conservation projects.

Friend of the Sea certification program allows assessment of fisheries and aquaculture products according to sustainability criteria and requirements. The certification, granted following an audit by independent certification bodies, ensures that a product complies with the sustainability requirements.

Requirements are classified as Essential, Important or Recommendations, according to their level of importance.

Essential Requirements: 100% conformity to essential requirements is mandatory in order for the certification body to certify the organisation's product. Any lack of compliance with these requirements will generate a Major Non Conformity and the organisation has to undertake effective corrective actions, to be implemented within three months from the issuing of the Non Conformity. The organisation shall provide satisfactory evidence to the certification body of correction of all major non conformities. Six months are allowed exclusively for correction of requirements 2.1 and 2.2, in consideration of their more complex nature.

Important Requirements: 100% conformity to important requirements is mandatory in order for the certification body to certify the organisation's product. Any lack of compliance with these requirements is to be considered as a Minor Non Conformity and the organisation has to propose effective corrective actions (declaration of intents and implementation plan), to be submitted to the certification body within three weeks from the issuing of the non-conformity. This proposal shall also include a timetable concerning the implementation of each correction measure. Each proposed corrective action shall be fully implemented within the following 12 months.

<u>Recommendations:</u> Compliance with recommendations is not mandatory for the product to be certified. However compliance with recommendations will be verified during the audit and any deficiency will be included in the Audit Report as a recommendation. The organisation shall inform the certification body, during the following audit, regarding any corrective measures implemented.

Requirements which are not applicable to the audited organisation will be marked with 'N.A.'

Description of the Organisation

This document shall only be filled out by personnel of the certification body in charge of the audit. It shall be filled out in English if spoken fluently.

a) NAME OF THE ORGANISATION TO BE AUDITED:

DALYAN SU ÜRÜNLERİ VE GIDA SAN. NAK. TİC.LTD.ŞTİ

b) NAME OF THE ORGANISATION REQUESTING THE AUDIT:

DALYAN SU ÜRÜNLERİ VE GIDA SAN. NAK. TİC.LTD.ŞTİ

c) IS THE ORGANISATION TO BE AUDITED PART OF A GROUP? IF SO, PLEASE SPECIFY THE NAME OF THE GROUP AND LIST ALL MEMBERS:

YES. KOBYALAR GROUP (KOPTUR AND DALYAN)

d) ADDRESS OF THE ORGANISATION TO BE AUDITED:

Head Office: Merkez Mah. Akmaz Küme Evleri No:42, 61420 Trabzon / Turkey

Factory: Karaağaç Köyü Gevez Mevkii No:21/A Dikmen , Sinop / Turkey

d) NAME AND CONTACTS OF THE PERSON WITHIN THE ORGANISATION RESPONSIBLE FOR THE AUDIT AND CONTACTS WITH THE AUDITOR:

BERAT ŞAHİN (STOCK RESPONSIBLE)

f) FLEET TO BE AUDITED:

Name of the fishing vessel	Registration number	Vessel's flag	Fishing method	Capacity (MT)	Unloading harbour	Ship owner, if different from a)
ŞAHİN BALIKÇILIK	61 A 2606	Turkish	Purse seiner	GT 177 GRT 590	Mainly TRABZON	ŞAHİN BALIKÇILIK
BURAK YAĞIZ	61 A 2594	Turkish	Purse seiner	42, 2 mtrs GT 593 GRT 178	Mainly TRABZON	BURAK YAĞIZ
HACI YUSUF BALIKÇILIK	61 A 2208	Turkish	Purse seiner	41,4 mtrs GT 80 GRT 268	Mainly VAKFIKEBİR	HACI YUSUF BALIKÇILIK
KÖROĞLU BALIKÇILIK	61 A 1392	Turkish	Purse seiner	45,32 mtrs GT 106 GRT 354	Mainly TRABZON	KÖROĞLU BALIKÇILIK
YILMAZ BALIKÇILIK	61 A 1057	Turkish	Purse seiner	40 mtrs GT 89 GRT 298	Mainly TRABZON	YILMAZ BALIKÇILIK
AKERKO 1	61 A 1917	Turkish	Purse seiner	42 mtrs GT 90 GRT 899	Mainly VAKFIKEBİR	AKERKO 1
DENİZANA-2	57 A 1528	Turkish	Purse seiner	33.8 mtrs GT 56 GRT 187	Mainly SINOP	DENİZANA-2
MALKOÇOĞLU BALIKÇILIK- 1	55 A 2912	Turkish	Double-water medium water trawl	31.12 mtrs GT 53 GRT 176	Mainly SAMSUN	ATUF MALKOÇ VE ORTAKLARI
MALKOÇOĞLU MUSTAFA REİS	55 A 1058	Turkish	Double-water medium water trawl	27.6 mtrs GT 32 GRT 107	Mainly SAMSUN	ATUF MALKOÇ

g) **VESSELS AUDITED ON SITE** (the auditor shall list the vessels which have actually been audited on site as sample representing the fleet):

Name of the fishing vessel	Registration number	Unloading harbour
OALIN DALIKOU IK	04.4.0000	M.: I TRADZONI
ŞAHİN BALIKÇILIK	61 A 2606	Mainly TRABZON
BURAK YAĞIZ	61 A 2594	Mainly TRABZON
HACI YUSUF BALIKÇILIK	61 A 2208	Mainly VAKFIKEBİR
KÖROĞLU BALIKÇILIK	61 A 1392	Mainly TRABZON
YILMAZ BALIKÇILIK	61 A 1057	Mainly TRABZON
AKERKO 1	61 A 1917	Mainly VAKFIKEBİR
DENİZANA-2	57 A 1528	Mainly SİNOP
MALKOÇOĞLU BALIKÇILIK-1	55 A 2912	Mainly SAMSUN
MALKOÇOĞLU MUSTAFA REİS	55 A 1058	Mainly SAMSUN

9 vessels should have been visited as samples during the audit in accordance with the contract but only 2 vessels could be audited on site. Because the vessels are out of the country in this season. Only the documentation for other 7 sample vessels has been evaluated.

h) FISHING ZONE (Coordinates and/or FAO area and/or subarea and/or ICES area and/or EEZ. If available, please include a map.):

FAO 37.4.2

i) COMMON AND SCIENTIFIC NAME OF THE SPECIES TO BE AUDITED:

Common Name	Scientific Name
Anchovy	Engraulis encrasicolous

j) TOTAL NUMBER OF EMPLOYEES:

59

k) ENVIRONMENTAL CERTIFICATIONS AND AWARDS

ISO 14001 certificate

I) ADDITIONAL INFORMATION:

The company purchased fish from 130 purse seiner vessels for the production of Fish meal and Fish oil produced in its own plant. The vessels subjected to certification are listed as an attachment to the report.

The harbors where vessels normally unload are the harbors from Hopa to Zonguldak/Eregli.

The fishing season for anchovy starts on the 1st September and stops on the 15th April.

Fish amount in the season: 2016 – 2017: 17.500.000 kg

Fish meal production in the season: 2016 – 2017: 3.500.000 kg

Fish oil production in the season 2016 – 2017: 1.700.000 kg

- The Friend of the Sea project was introduced (If not, the auditor shall provide a short description)
- The organisation and the ship owners were informed of the opportunity, in case of approval, of using the Friend of the Sea logo on the certified products
- The organisation has a document qualifying and confirming the roles of the staff carrying out the audit
- The duration of the audit was agreed upon
- The information included in the Preliminary Information Form (PIF) has **been confirmed** (in case of changes to the PIF, an updated version has to be promptly provided)

NOTES TO THE AUDITOR

- 1) The auditor shall fill out all fields in the checklist.
- 2) Checklist compilation guidelines are highlighted in the blue boxes.
- 3) The Auditor shall provide an explanation when requirements are not applicable.
- 4) The Auditor shall write YES when the organisation complies with a requirement and NO when it does not.
- 5) The Auditor shall comment and explain the positive or negative answers. Simple "YES," "NO," or "N.A." are insufficient.
- 6) Each relevant document shall be added to the final audit report in a separate and numbered attachment.
- 7) Photographic evidences added to the checklist or attached are appreciated.

Some stocks have been assessed by FAO-General Fisheries Commission for the Mediterranean (GFCM) SAC (Scientific Advisory Committee) and Sub-Committee on Stock Assessment (SCSA), GSA areas assessed were: GSA1, GSA3, GSA6, GSA7, GSA16, GSA17, GSA18, GSA2. In general these stocks showed a high variability and only in a few cases are showing decreasing trends in recent years. In the Black Sea, this species showed a sharp decline in 1989-1991 due to a combination of environmental problems and exploitation. The predatory species Mnemiopsis leidy was brought into the Black Sea from ballast water and this species preyed upon the eggs of many native species in the Black Sea. Landings figures have been low since then and they are now showing a very gradual increase after Boreo ovata, a predator of Mnemiopsis leidy (Isinibilir and Tarkan 1998), was also introduced again through ballast water. Turkish Statistical Organization annually updates the figures for quantities of caught fish per each species. For anchovies, the numbers show an increase since 2005 till 2006, an average constant value since 2006 till 2011 and a decrease in 2014. (See Annex 1) The species is defined as: Moderately exploited High biomass http://www.fao.org/3/a-ax799e.pdf

The fisheries management organisation is an institution responsible for fisheries management, including the formulation of rules governing fishing activities. The fishery management organisation may also be responsible for collection of information, its analysis stock assessment, monitoring, control and surveillance.

FAO 1997: FAO Technical Guidelines for Responsible Fisheries.

1.1.1	The stock under consideration shall NOT	Essential		Υ	IUCN RED LIST - In the Mediterranean
	be data deficient				Sea, it shows strong spatio-temporal variability related to environmental conditions. There is an important fishery of frys (very young individuals) in some areas in the Mediterranean Sea. Its annual landings (tons) in the Mediterranean Sea (1996-2005), obtained from the FAO FISHSTAT Fisheries Statistical Database (2007): 83,412 (1996), 102,203 (1997) 86,708 (1998), 87,149 (1999), 104,159 (2000), 110,768 (2001), 104,748 (2002), 100,738 (2003), 109,449 (2004) and 107,909 (2005). Landings figures show a sharp decline around 1990 in the Black Sea (it apparently disappeared from the Azov Sea then but has since recovered). Figures in the Mediterranean Sea show strong fluctuations. Some stocks have been assessed by FAO-General Fisheries Commission for the Mediterranean (GFCM) SAC (Scientific Advisory Committee) and Sub-Committee on Stock Assessment (SCSA). GSA areas assessed were: GSA17, GSA18, GSA22. In general these stocks showed a high variability and only in a few cases are showing decreasing trends in recent years. In the Black Sea, this species showed a sharp decline in 1989-1991 due to a combination of environmental problems and exploitation. The predatory species Mnemiopsis leidyi was brought into the Black Sea from ballast water and this species preyed upon the eggs of many native species in the Black Sea. Landings figures have been low since then and they are now showing a very gradual increase after Boreo ovata, a predator of Mnemiopsis leidyi (Isinibilir and Tarkan 1998), was also introduced again through ballast water. Turkish Statistical Organization annually updates the figures for quantities of caught fish per each species. For anchovies, the numbers show an increase since 2005 till 2006, an average constant value since 2006 till 2011 and a decrease in 2014. (See Annex 1) The species is defined as: Moderately exploited High biomass http://www.fao.org/3/a-ax799e.pdf The current exploitation rate (E=0.53)
1.1.2	The stock under consideration shall NOT be Over-exploited.	Essential	F<=F _{msy} within probability range of available stock assessments or at least F<=F _{lim} (limit reference point – or its proxy) If overfishing of a stock under consideration of a certified fishery occurs, the certification of this fishery is suspended or revoked.	Y	THE SPECIES IS DEFINED AS: Moderately exploited High biomass http://www.fao.org/3/a-ax799e.pdf see above Scientific, Technical and economic Committee for Fisheries Black Sea assessments (STECF 15-16) The current exploitation rate (E=0.53), estimated based on the average F[1:3] of the last 3 years, exceeds the precautionary threshold 0.4 recommended for small pelagic fish (Patterson, 1992). On the other hand, the high variance of the F estimates averaged over the last 5 years hampers to make meaningful short term predictions. General trend in the last ten years, however, indicates a slight decrease in the fisheries mortality.

		1.1.3	The stock under consideration shall NOT be Over-Fished.	Essential	B>=B _{msy} within probability range of available stock assessments or at least B>B _{lim} (limit reference point – or its proxy). If the stock under consideration of a certified fishery becomes overfished, the certification of this fishery is suspended or revoked.	(Patterson, 1992). On the other hand, the high variance of the F estimates averaged over the last 5 years hampers to make meaningful short term predictions. General trend in the last ten years, however, indicates a slight
--	--	-------	---	-----------	--	--

All the requirements related to the current status and trend of the stock under assessment shall include data of bycatch, discards, unobserved mortality, incidental mortality, unreported catch, and catch outside of the unit of certification.

Up-to-date data and/or information on the stock status is available from one of the following: FAO, Regional Fisheries Management Organisation, Marine Research National Authority, University, other independent research institute. Other information may include generic evidence based on similar stocks, when specific information on the stock under consideration is not available, providing there is low risk to the stock under consideration in accordance with the Precautionary Approach.

1.1.4	The methodology of assessment of the status and trends of the stock under consideration shall be made publicly available in a timely manner.	Essential	Documental evidence	Y	The methodology of assessment of the status and trends of the stock under consideration is made publicly available in a timely manner.
1.2	Only applicable to small-scale and artisanal fisheries (i.e. it is not applicable to freezer vessels) If the organisation complies with all the requirements of the standards in the present document and does not catch more than 10% of the total catch (weight) of the same target species in the stock under consideration, requirements 1.1.1, 1.1.2., 1.1.3. do not apply.	Essential	Weight of catches by fishery with same fishing method as the one under assessment is not over 10% of total catch from the same stock.	N/A	Fishery is not small-scale and artisanal.

 ${\it The Auditor shall fill-in these fields ONLY in case of negative answer to the 1.1\ requirement.}$

The aim of this requirement is to allow certification of small-scale artisanal and/or traditional fisheries targeting stocks which might have been overfished by bigger scale vessels and fisheries.

2 ECOSYSTEM and HABITAT IMPACT

No.	Requirement	Level	Parameters and Information	Y/N	Comments

2.1	Current data and/or other information is collected and updated about the effects of the fishery under assessment on the ecosystem structure and habitats vulnerable to damage by fishing gear, also considering the role of the stock in the food web (e.g. key prey or predator species). The same information regarding any associated enhancement activities is also collected and maintained.	Important	Data collection shall be in accordance with international standards (e.g. CWP and DSF in the High Seas, FAO Programme). The data and analysis may include local, traditional or indigenous knowledge and research, providing its validity can be objectively verified. The methodology and results of the analysis of the most probable adverse impacts of the unit of certification and any associated culture and enhancement activity on the ecosystem are made publicly available in a timely manner, respecting confidentiality where appropriate.		There is current data and updated about the effects of the fishery under assessment on the ecosystem structure and habitats vulnerable to damage by fishing gear, also considering the role of the stock in the food web (e.g. key prey or predator species). PR.01 Sustainable Fishing Procedure (26.12.2016 / rev.0) defines the system by referring the national regulations and scientific researches.
2.2	The fishery or fleet complies with Marine Protected Areas regulation.	Essential	Verify compliance also by use of VMS and plotters tracking and World database www.mpaglobal.n etc		Regulation N.2012/65 of the Food, Agriculture and Animal Livestock Ministry identifies the protected areas for Mediterranean and Black Sea. The protected areas are identified by coordinates and maps (Map 42, Map 43). (See Annex 2.2) The coordinates are recorded on the gps system of each vessel so that the violation is warned and recorded. Cost guards check regularly the roots and lights are placed near the areas as a warning.
The Au	uditor, through random sampling, using the that the fishing activity is not carried out	ne Satellite Conti	rol System on the ve	essels o	r valid alternative evidence, shall
declara	ation from local Control Authorities shall refer to www.mpaglobal.org).				
2.2	The fishery or fleet shall use fishing	Essential	The seabed and	Y	Purse seine does not affect the sea bed
	gears that do not affect the seabed		benthic marine wildlife shall		because they catch the schools at the mid-water level.
	unless proven that such impact is negligible.		revert to their original conditions within a maximum of 30 days from the impact of the fishing gear on		and water reven
The Au	uditor shall collect conformity oxider se		the seabed.		
The Au	uditor shall collect conformity evidence.				

2.3	The organisation has requested or conducted an assessment of the impact of its activities on essential habitats for the stock under consideration and on habitats vulnerable to damage by the fishing gear.	Recommenda tion	The RFMO shall carry out studies which consider the impact of the fleet or fishery on the ecosystem and it shall take this into account when producing management's advices.	N	The organisation has not requested or conducted an assessment of the impact of its activities on essential habitats for the stock under consideration and on habitats vulnerable to damage by the fishing gear.
The Au	uditor shall provide evidence referring to	all available stud	lies.		
2.4	In the case of enhanced fisheries (e.g. fishery and aquaculture activities) the organisation is assessed also against FOS Aquaculture standards	Essential	Full compliance with FOS-Aqua standards	N/A	The fishery is not enhanced.
2.4.1	Natural reproductive stock components of enhanced stocks are not overfished nor substantially displaced by stocked components.	Essential	The displacement shall not result in a reduction of the natural reproductive stock component below abundance-based target reference points (or their proxies).	N/A	The fishery is not enhanced.
2.4.2	Management objectives are in place that seek to avoid significant negative impacts of enhancement activities on the natural reproductive stock component of the stock under consideration and any other wild stocks from which the organisms for stocking are being removed.	Essential	Target Reference points or their proxies.	N/A	The fishery is not enhanced.

Only applicable to enhanced fisheries.

Enhanced fisheries are fisheries supported by activities aimed at supplementing the recruitment and raising the total production of a fishery beyond a level supported by natural processes (FAO Technical Guidelines for Responsible Fisheries. Inland fisheries. No 6. Rome, FAO 1997.

3 SELECTIVITY

No.	Requirement	Level	Parameters	Y/N	Comments
			and		
			information		

3.1	Accidental catches shall not include species listed in the IUCN red list of endangered species as Vulnerable or higher risk. The IUCN assessment shall have been carried out no more than 10 years before and it shall have not been outdated by a more recent stock assessment for the given species / stock.	Important	Bycatch studies shall have been carried out by the relevant bodies (FAO or RFMOs or National Authorities or Universities) and they shall provide information regarding level of bycatch and bycaught species These studies shall not indicate the presence of species vulnerable or higher risk among the regularly caught (over 0.25% of total weight) species according to www.redlist.org.	N	No turtles and seal dogs are present in the fishing zone, or other turtle species. Very seldom they take sharks; in such a case, if the animal is dead the ministry is informed. All the matter is regulated by the competent Ministry. For any other kind of protected species involuntary catches, the captain has to declare to the competent authority. Turkish authority performs regular checks on boats coming to the harbour; in the items controlled they introduce also the check of protected species. PR.02 Procedure related to Accidental Catch & Bycatch and Discard(26.12.2016/rev.0) is in place related to the subject. There is no any record related to the accidental catches.
3.1.1	The organization collects and maintains current data and/or other information about the effects of the fishery and associated enhancement activities on endangered species, non-target catches and discards.	Essential	Traditional, fisher or community knowledge can be used as reference, provided its validity can be objectively verified	Y	The organization collects and maintains current data and information about the fishery on endangered species, catches and discards. PR.02 (26.12.2016/rev.0) describes all the precautions related to fishery on endangered species, catches and discards by referring the national regulations and scientific researches.
effects actuall	of the fishery on non-target stocks. I y occurred on site at the time of unloa edlist.org. The Auditor shall provide a	The information ading. The list	n included in the li shall also be comp	ist shall pared w	tht accidentally, and an assessment of the liberal be compared with the accidental catches with the database of the IUCN red list e accidentally caught species is included in
3.2	The level of discard (in weight) shall not be over 8% of total catch.	Essential	Discards are bycaught species which are not used for human consumption not for fish meal or fish oil production.	Y	PR.02 (26.12.2016/rev.0) gives the information related to the level of discard (in weight). It is not over 8% of total catch by weight.
3.3.1	THIS REQUIREMENT IS TO BE COMPLIED WITH ONLY BY TUNA FLEETS/FISHERIES. FOR ALL OTHER FLEETS/FISHERIES, IT IS NOT APPLICABLE (NA). FADs (Fish Aggregating Devices). The fleet or fishery shall provide a census of number of FADs deployed in the previous 12 months per vessel and its shall report on a yearly basis to Friend of the Sea regarding FADs deployment per vessel.		Auditor shall collect the data provided by the fleet or fishery and attach it to the audit report	N/A	The fisheries are not for Tuna.

4 LEGAL CONFORMITY

N°	Requirement	Level	Parameters and information	Y/ N	Comments
4.1	All fishing vessels shall be officially registered.	Essential	Vessel registration and fishing license inspection.	Y	All fishing vessels are officially registered (See Annex 4.1)
					number. The Auditor shall collect on s (copies of photos of the documents)
4.2	The fleet does not include boats with a flag of convenience.	Essential	The auditor shall verify that the boat is not registered to another Nation identified as Flag of Convenience (http://www.itfs eafarers.org/focregistries.cfm).	Y	There are not FOC vessels. All the fleets are recorded on the Turkish register.
he Aud	itor shall verify according to the web	site http://w	ww.itfseafarers.org	/foc-re	gistries.cfm.
4.3	The fleet does not include IUU (illegal, unreported, unregulated) fishing vessels.	Essential	The boat cannot be included in the list http://eur-lex.europa.eu/L exUriServ/LexU riServ.do?uri=O J:L:2012:350:0 038:0043:EN:P DF	Y	The fleet does not include IUU (illegal, unreported, unregulated) fishing vessels.
		on the webs	ita		
The Au					
	ditor shall verify according to the list ur-lex.europa.eu/LexUriServ/LexUri			8:0043:	EN:PDF

4.5	The Organization complies with national and international regulations. Compliance with the following regulations in particular has to be confirmed and verified:	Essential	Countries' fisheries laws are available on the website FAO http://www.fao. org/fishery/cou ntryprofiles/sea rch/en. The Auditor shall specify applicable indicators.	Y	The Organization complies with national and international regulations.
4.5.1	TAC (Total Allowable Catches)	Essential	Countries' fisheries laws are available on the website FAO http://www.fao. org/fishery/cou ntryprofiles/sea rch/en. The Auditor shall specify applicable indicators.	Y	Turkish regulation doesn't establish quota by the moment but the measure is going to be introduced. Daily quantity of catching is recorded on an online government system named as SUBIS. At the first step; a government organization Seafood Cooperative at the harbor gives all the information to the branch office of the Ministry. The personnel in the ministry branch office access all the information to SUBIS. After the caught fish is weighed in the factory, the company records exact amount of fish to SUBIS. So all of the fish quantity caught can be followed up by the authorities.
4.5.2	Use of a logbook	Essential	Countries' fisheries laws are available on the website FAO http://www.fao. org/fishery/cou ntryprofiles/sea rch/en. The Auditor shall specify applicable indicators.	Y	The log books are regularly filled in each applicable part. See Annex 4.5.2
4.5.3	Mesh size	Essential	Countries' fisheries laws are available on the website FAO http://www.fao. org/fishery/cou ntryprofiles/sea rch/en. The Auditor shall specify applicable indicators.	Y	Mesh sizes are below: 7/9 mm upper side (70%), 15/18 mm central side (20%), 40 mm Bottom side (10%)
4.5.4	Net size	Essential	Countries fisheries laws are available on the website FAO http://www.fao. org/fishery/coun tryprofiles/searc h/en. The Auditor shall specify applicable indicators.	Y	Net sizes are below: Depth: 90 mariner's measurements (164 m) Length: 1200 m

4.5.5	Minimum size	Essential	Countries' fisheries laws are available on the website FAO http://www.fao.or g/fishery/country profiles/search/en . The Auditor shall specify applicable indicators.	Y	IUCN RED LIST - In the Black Sea and Azov Sea, there are minimum catch sizes: 6.5 cm (Georgia and Ukraine), 7 cm (Romania), 8 cm (Bulgaria) and 9 cm (Turkey). In the Black Sea, minimum catch size is 10 cm (Unsal 1989). In the Mediterranean Sea, the minimum catch size set by the General Fisheries Commission for the Mediterranean (GFCM) is 9 cm. In some cases there are national efforts to control the fisheries (e.g., time and area closures).
4.5.6	Distance from the shore	Essential	Countries' fisheries laws are available on the website FAO http://www.fao.or g/fishery/countryp rofiles/search/en. The Auditor shall specify applicable indicators	Y	The minimum allowable depth for Purse seine is 24 meters according to Turkish regulation. It is not declared as "distance from the shore".
4.5.7	Measures for the reduction of accidental catches	Essential	Countries fisheries laws available on the website FAO http://www.fao.or g/fishery/countryp rofiles/search/en. The Auditor shall specify applicable indicators.	Y	The type of gear is quite selective - the mesh size is controlled by the Ministry in order to ensure that the mesh size is appropriate to the specie (purse seine). PR.02 (26.12.2016/rev.0) describes all the precautions for reduction of accidental catches by referring the national regulations and scientific researches.
4.5.8	No fishing in protected habitats	Essential	Countries' fisheries laws are available on the website FAO http://www.fao.or g/fishery/countryp rofiles/search/en. The Auditor shall specify applicable indicators	Y	No fishing is allowed in protected area. Regulation N.2012/65 of the Food, Agriculture and Animal Livestock Ministry identifies the protected areas for Mediterranean and Black Sea. The protected areas are identified by coordinates and maps (See Annex 2.2 - Map 42, Map 43). The coordinates are recorded on the GPS system of each vessel so that the violation is warned and recorded. Turkish Coast Guards check regularly the roots and lights are placed near the areas as a warning.
4.5.9	Use of forbidden gears, chemical substances and explosives	Essential	Countries' laws are available on the website FAO http://www.fao.or g/fishery/countryp rofiles/search/en. The Auditor shall specify applicable indicators	Y	The forbidden gears cannot be used. The use of chemical substances and explosives is forbidden by the authorities. The boats are always controlled by Turkish Coast Guard and Food, Agriculture and Animal Livestock Ministry.

The Auditor shall verify, according to national and international regulations, that the aforementioned legal requirements are met and provide an exhaustive report with reference to the law. Where possible, the Auditor shall provide documents and photographs. A detailed description of the fishing regulation concerning each Country is available on FAO's website http://www.fao.org/fishery/countryprofiles/search/en

5 - MANAGEMENT

No.	Requirement	Level	Parameters	Y/N	Comments
			and		
			information		

5.1.1a	A fishery management organization, that holds a legal mandate in compliance with national and international laws, manages, by means of a Fishery Management Plan, the fishery of which the fishery or fleet under audit is a part.	Essential	Evidence of conformity to local laws and regulations. A map of existing RFMOs is available at http://www.fa o.org/figis/ge oserver/factsh eets/rfbs.html In addition, national fishery ministries and authorities can be considered, e.g. Fisheries Management Organizations (FMO).	Y	General Directorate of Fisheries And Aquaculture (inferior to "Food, Agriculture and Animal Livestock Ministry") is the legal authority in Turkey. Selin Dündar is responsible from Fishery Management System according to Assignment Letter with the date of 02.01.2017. (See Annex 5.1.1.a). She is the contact person with the legal authorities. The legal authorities conduct inspections very frequently.
5.1.1b	If the stock under consideration is a transboundary fish stock, straddling fish stock, highly migratory fish stock or high seas fish stock, a bilateral, sub regional or regional fisheries organization or arrangement is in place. States and entities in the arrangement shall collaborate in the management of the whole stock unit and bycaught or discarded species over their entire area of distribution. The arrangement shall ensure the rights of the small-scale fishing communities are granted.	Essential	Evidence of consideration of the rights of small scale fishing communities.		There is a regulation related to small scale fishing communities in the country. http://www.tarim.gov.tr/BSGM/Duyuru/65/4 2-Numarali-Amator-Amacli-Su-Urunleri-Avciliginin-Duzenlenmesi-Hakkinda-Tebligno-2016 36 -Resmi-Gazetede-Yayimlanmistir There must be special equipment for Anchovy fishing. The small scale fishing is not suitable for anchovy. Purse seine anchovy fishing is allowed only for the boats bigger than 12 m according to Turkish Regulation no: 1380. http://mevzuat.basbakanlik.gov.tr/Metin.Aspx?MevzuatKod=1.5.1380&MevzuatIliski=0 &sourceXmlSearch=%C3%9CR%C3%9CNLER%C4%B0 Turkish Coast Guard is controlling the vessels strictly. The organization has "Sustainable Fishing Policy". See Annex 5.1.1b
5.1.1c	The fishery management organization convenes at least yearly to update its management advices according to the most updated data.	Essential	Evidence of meetings frequency.		The fishery management organization convenes at least yearly to update its management advices according to the most updated data according to PR.19 Management Review Procedure. They have a meeting schedule prepared for 2017. See Annex 5.1.1c
5.1.1d	If the fishery management system includes trade-related measures, they shall be adopted and implemented in accordance with international law, including WTO Agreements.	Essential			The company complies with national and international laws. They have an EC Export Number according to European Community rules. Turkey has also become a member of WTO in 1995.
The Au	ditor shall verify and describe briefly the l	legal and admini	ctrative structur	e in for	co and provide the evidence of

The Auditor shall verify and describe briefly the legal and administrative structure in force and provide the evidence of compliance with local laws and regulations.

The fishing company or organisation may also be part of traditional or community system of management of the stock, provided their performance can be objectively verified.

5.1.2	The fisheries management system (FMS) under which the fishery or fleet under audit is managed shall be both participatory and transparent, to the extent permitted by national laws and regulations.	Essential	Information and advice used in FMS decision-making is publicly available. A consultation process regularly seeks and considers relevant information. Consultation with Deep Sea fishers shall be carried out if applicable.	Y	All legal transport certificates and other legal documents are reachable in accordance with the customer requirements. All of the details related to the fishes caught are recorded on obligatory online data access system (SUBIS). The company has to give the information periodically to Turkish Statistical Institution.
5.1.3	Small-scale fishing communities and deep-sea fishers shall be involved in the planning and implementation of management measures affecting their livelihood, as appropriate.	Important	Evidence of involvement of local communities. E.g. monitoring and control of fishing activities, protected areas	Y	Sea Food Cooperative is the local responsible community. The organization is attending to the workshops frequently. Small scale fishing communities rights are under guarantee with the national regulations. Agriculture and Animal Livestock Ministry identifies the protected areas for Mediterranean and Black Sea. The protected areas are identified by coordinates and maps (See Annex 2.2 - Map 42, Map 43). The coordinates are recorded on the GPS system of each vessel so that the violation is warned and recorded. Turkish Coast Guards check regularly the roots and lights are placed near the areas as a warning.
5.2.1	A precautionary approach is undertaken to protect the target stock and its habitat and safeguard the marine environment. (FAO Code of conduct, art 7.5)	Important	Procedure and evidence of conformity.		PR.01 Sustainable Fishing Procedure (26.12.2016/rev.0), PR.02 Procedure related to Accidental Catch & Discard(26.12.2016/rev.0), PR.03 Endangered Species Procedure (26.12.2016/rev.0), PR.05 Procedure for Prevention of Ghost Fishing describe the precautionary approach is undertaken to protect the target stock and its habitat and safeguard the marine environment by referring the national regulations and scientific researches. There is a law related to protocol on protection of environment and biological variety of Black Sea. https://www.tbmm.gov.tr/kanunlar/k5212.html
5.2.2	Management measures specify the actions to be taken in the event that the status of the stock under consideration (with special consideration to deep-sea stocks) drops below a level consistent with achieving management objectives. These measures shall prompt the restoration of the stock to such levels within a reasonable time frame.	Important	Procedure indicating target reference points and time frame.	Y	PR.01 Sustainable Fishing Procedure (26.12.2016/rev.0)describes the system. Management Objectives are established yearly and followed up every three months according to the procedure.

5.2.3	Efficacy of management measures and their possible interactions is kept under continuous review.	Essential	Evidence of periodical reviews of the management measures shall be provided.	Y	Management Objectives are established yearly and followed up every three months according to PR.01 Sustainable Fishing Procedure (26.12.2016/rev.0). The last periodical review was on 24.05.2017. See Annex 5.2.3
	ditor shall verify if the Country the flag o ganisation shall include a precautionary a				
5.3	The compliance with points 5.1 and sub and 5.2 is achieved through monitoring, surveillance, control and enforcement.	Essential	Procedure and evidence of monitoring and control.	Y	It has been explained in the sections and evidences are added to the report as attachments. PR.01 Sustainable Fishing Procedure (26.12.2016/rev.0), PR.02 Procedure related to Accidental Catch, Bycatch & Discard (26.12.2016/rev.0), PR.03 Endangered Species Procedure (26.12.2016/rev.0), PR.05 Procedure for Prevention of Ghost Fishing are the documental evidences for the compliance. They referee the national regulations and scientific researches.
	 uditor shall describe briefly the monitorin tivities undertaken by the fishery enforce				methods and provide the evidences of
the act			ensure compnanc	.e.	
5.4	The fleet or fishery shall record bycatch from each fishing trip.	Essential	Procedure and evidence of recording during at least one fishing trip.	Y	PR.02 Procedure related to Accidental Catch, Bycatch & Discard (26.12.2016/rev.0) describes the recording bycatch See Annex 5.4
5.5	The fleet or fishery shall record discards.	Essential	Procedure and evidence of conformity	Y	PR.02 Procedure related to Accidental Catch, Bycatch & Discard (26.12.2016/rev.0) describes the recording of discards. See Annex 5.5
5.5.1	The organisation shall make bycatch and discard data publicly available.	Recommendatio n	Procedure and evidence of conformity	N	Bycatch and discard data is not publicly available.
The Au	uditor shall provide evidence (photos or o	opies) of the repo	ort on accidental	catche	es and discarded fish.
5.6	A management system to prevent possible accidental catch and significant negative impacts of endangered species shall be in place.	Essential	Procedure, performance indicators and evidence of conformity.	Y	PR.02 Procedure related to Accidental Catch, Bycatch & Discard (26.12.2016 /rev.0) and PR.03 Procedure related to Endangered Species (26.12.2016 /rev.0) define the system to prevent possible accidental catch and significant negative impacts of endangered species. Performance indicator is set for 2017 as "Accidental catch and significant negative impacts of endangered species must not exist"
5.7	The organisation implements a management program to reduce the accidental catch of non-target species, including procedures for the release of live animals under conditions that guarantee high chances of survival.	Essential	Procedure, performance indicators, and evidence of conformity.	Y	PR.02 Procedure related to Accidental Catch, Bycatch & Discard (26.12.2016 /rev.0) defines the system to reduce the accidental catch of non-target species, including procedures for the release of live animals under conditions that guarantee high chances of survival. Performance indicator is set for 2017 as "Accidental catch of non-target species will be % 8 by weight" PR.02.F.01 Accidental Catch of Non-target Species Follow up Form is used for

5.8 The Au 5.9	The fleet is equipped with measures that guarantee a quick retrieval of lost fishing devices to avoid "ghost fishing". ditor shall obtain a copy of the aforemential only applicable TO FREEZER VESSELS.	ioned procedure Important	Documental	Y N/A	PR.05 Procedure for Prevention of Ghost Fishing describes the measures that guarantee a quick retrieval of lost fishing devices to avoid "ghost fishing". PR.05.FR.01 Protocol for Fishing Equipment Control after Fishing is used for recording the measures for ghost fishing. See Annex 5.8
	AND FLEETS. NOT APPLICABLE TO SMALL-SCALE ARTISANAL FISHERIES. The fleet has a full-time on-board independent observer who reports compliance with Friend of the Sea requirements. In alternative a CCTVs system has been deployed and it is accessible by the auditor to verify compliance with Friend of the Sea requirements		evidence of employment. At least one monthly report of the on-board inspector.		
	ditor shall verify the presence of the obser				Feet Control of the C
5.10a	Outcome indicator(s), including Target and Limit reference points, are defined for all management objectives related to the conservation of the stock under consideration. Management Objectives take into account the Best Scientific Evidence available	Essential	rarget reference points. e.g maximum sustainable yield (MSY, or a suitable proxy) or a lesser fishing mortality if that is applicable to the fishery. Marine resources exploited in deep-sea fisheries in the high seas have low productivity, thus biological reference points shall be set to ensure long term sustainability.	Y	The organization has established Outcome Indicators including Target Limit reference points. Outcome indicators are defined in PR.03.PL.01 Performance Indicators. See Annex 5.10a
5.11	There are clear management objectives, outcome indicators and measures defined and periodically reviewed by means of risk assessment to avoid, minimize, or mitigate impacts on:	Essential	Procedure, performance indicators, action taken and outcomes.	Y	Management Objectives are established yearly and followed up every three months according to PR.01 Sustainable Fishing Procedure (26.12.2016/rev.0). The last periodical review was on 24.05.2017 See Annex 5.11
5.11.1	Essential habitats for the stock of consideration, and vulnerable ecosystems, including those potentially impacted by Deep-Sea fisheries			N/A	
5.11.2	Endangered species			Y	See Annex 5.11
5.11.3	Non target stocks			Y	See Annex 5.11
5.11.4	Dependent predators and/or preys			Y	See Annex 5.11

5.11.5	Ecosystem structure and processes		Y	See Annex 5.11
	A yearly reviewed Ecosystem Approach to Fisheries is in place	 Documental evidence		There is no yearly reviewed Ecosystem Approach to Fisheries.
	Fisheries management approaches, plans and strategies are an integral part of integrated coastal management, and/or ocean management for oceanic fisheries.	Documental evidence		There are no fisheries management approaches, plans and strategies which are an integral part of integrated coastal management.

The Auditor shall provide evidence of the reference values targeted and implemented. These can, in some cases, be threshold reference limits and precaution limits set by regional bodies.

The management measures implemented by the management system of the organization shall be based on the best available scientific evidence. Any traditional or scientific knowledge can be used within the management system, given that it can be objectively verified by the auditor

6 WASTE MANAGEMENT

No.	Requirement	Level	Parameters and information	Y/N	Comments
6.1	The fishing company recycles, re-uses or re-processes all materials used during fishing, conservation and transport of the fish up to the selling point, including packaging.	Essential	Procedure and evidence of conformity.	Y	PR.06 Waste Management Procedure (26.12.2016/rev.0) describes recycles reuses or re-processes all materials used during fishing, conservation and transport of the fish up to the selling point.
6.2	The fishing company implements measures to prevent dispersion of waste in the sea (including fuels and lubricants and plastic matter)	Essential	Procedure and evidence of conformity.	Y	PR.06 Waste Management Procedure (26.12.2016/rev.0) includes measures to prevent dispersion of waste in the sea (including fuels and lubricants and plastic matter). The boats have "Maritime Affairs and Communications International Oil Population Prevention certificate" from Ministry of Transport as an obligation. See Annex 6.2 (1) Waste transfers are recorded on "Transfer Form for Wastes Generated by Ships (Marpol 73 / 78 Annex-1,4,5)". See Annex 6.2 (2)
6.3	The fishing company utilizes all the chemical non-toxic alternatives available in order to reduce the use of toxic, persistent or bio-accumulating substances.	Essential	Procedure and evidence of conformity.	Y	The fishery uses all available nontoxic products according to PR.06 Waste Management Procedure (26.12.2016/rev.0).
6.4	The company does not use CFC, HCFC, HFC or other refrigerants that cause ozone depletion.	Essential	Procedure and evidence of conformity.	Y	The company does not use CFC, HCFC, HFC or other refrigerants that cause ozone depletion according to PR.06 Waste Management Procedure (26.12.2016/rev.0).

The Auditor shall provide procedures complete with photographic evidence.
